DIRECTIONS FOR USE:

Application rates will vary due to: turf or vegetation type, height of cut, color and density; the color of the other spray solution per acre [>85 gallon/acre (>320 L/0.5 hectare)] may require a higher application rate. Initial applications should be made at the highest rates. This allows the operator to become familiar with the effect of **Right On Green** on the turf. In subsequent applications, the **Right On Green** rates should be adjusted to what is appropriate for the individual operator. **Right On Green** may be added anytime during the spray tank filling process. Minimum agitation is suggested.
